Anton Havlovskyi

Curriculum Vitae

This document might be outdated.
Please reffer to the web-version.

Profile

I'm a student of BUT / junior informational technology specialist.

I can work with any programming language - it's just a tool anyway - but the ones that I use most frequently are Python, C/C++, Java and PHP. I also work with Linux systems, Git, Docker, and write my own shell scripts. And, of course, I know HTML, CSS, and JavaScript.

As for natural languages, I know Russian, Ukrainian, Czech, and, most importantly, English. The first two are my natives, my Czech language level is B2 - I finished a language school - and my English level is C1.

Education

Melitopol College of Industry and Economics: Computer Science
[[2015-2019 | Graduated with honors]]

Brno University of Technology: Faculty of Informational Technology
[[2022-2025 | In Progress, 3rd year]]

My projects

NOTE: I decided to NOT post most of my university projects on github but I will mention some of the bigger ones.
1. A compiler for a subset of Swift language, written in C. Was made in cooperation with other students

2. A simple 2D robot simulator. Java. [link](#)

3. A custom made discord server bot. Python. [See here](#)

4. My github page with more of my projects: [link](#)
